

What I claim as my invention is:

1. A side view mirror in combination with a vehicle comprising:
  - (a) a mirror, the mirror including a front surface,
  - (b) a glass layer attached to the front surface of the mirror,
  - (c) a casing to house the mirror, the casing attached to the vehicle, and
  - (d) at least one control inside the vehicle for moving the mirror.
2. A side view mirror in combination with a vehicle according to claim 1 wherein the glass layer attached to the front surface of the mirror would be tinted glass.
3. A side view mirror in combination with a vehicle according to claim 1 wherein the glass layer attached to the front surface of the mirror would be smoked glass.
4. A side view mirror in combination with a vehicle according to claim 1 wherein the control inside the vehicle for moving the mirror would be a mechanical control.
5. A side view mirror in combination with a vehicle according to claim 1 wherein the control inside the vehicle for moving the mirror would be an electrical control.
